Art Unit: 1751

This application is a 371 of PCT/JP03/04435 (filed 04/08/03). Claims 1-12 are currently pending.

Initially, it is noted that this application contains claims to the following patentably distinct inventions:

- I) claims 1 and 3-9 (3-6 multiple dependent), drawn to Gd-doped cerium oxide materials/process;
- II) claims 2-6 (3-6 multiple dependent) and 10-12, drawn to Pr-doped cerium oxide materials/process.

During a conversation with Mr. Stephen Adrian on 12/26/06, an election was made to prosecute the invention of Group I, claims 1 and 3-9.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

In claim 3, line 2, delete "or 2".

In claim 5, line 2, delete "or 2".

In claim 6, line 2, delete "or 2".

Art Unit: 1751

In claim 7, line 2, after "conductor" add --comprising a Gd-doped cerium oxide and a spinel-type ferrite--.

Cancel non-elected claims 2 and 10-12.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Stephen Adrian on 12/29/06.

The following is an examiner's statement of reasons for allowance:

Seabaugh et al (2003/0027033) discloses method of making ceramic electrode materials comprising intimate mixtures of two or more components, including at least one nanoscale ionically conducting ceramic electrolyte material (e.g., yttriumstabilized zirconia, gadolinium-doped ceria, samarium-doped ceria, etc.) and at least one powder of an electrode material, which may be an electrically conducting ceramic electrode (Abstract). While the reference discloses electrically conducting perovskite phases of the formula (A,B)(C,D)O<sub>3</sub>, there is no disclosure or motivation to utilize the instantly required MFe<sub>2</sub>O<sub>4</sub> spinel materials as the electronic conductive phase.

JP 2005053763 and JP 2005281086 each disclose the instantly required  $Ce_{1-x}Gd_xO_{2-x/2}$  ion conductive phase and MFe<sub>2</sub>O<sub>4</sub> electronic

Art Unit: 1751

conductive phase (See Abstract(s)). The references are not available as prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark Kopec whose telephone number is (571) 272-1319. The examiner can normally be reached on Monday - Friday from 9:30 AM to 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Douglas McGinty can be reached on (571) 272-1029. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Application/Control Number: 10/510,343
